storetrade: store and category trading, 2017

US grocery data (84.51°, The Complete Journey), in US dollars. Week 1 is one day: 25 December has no tr

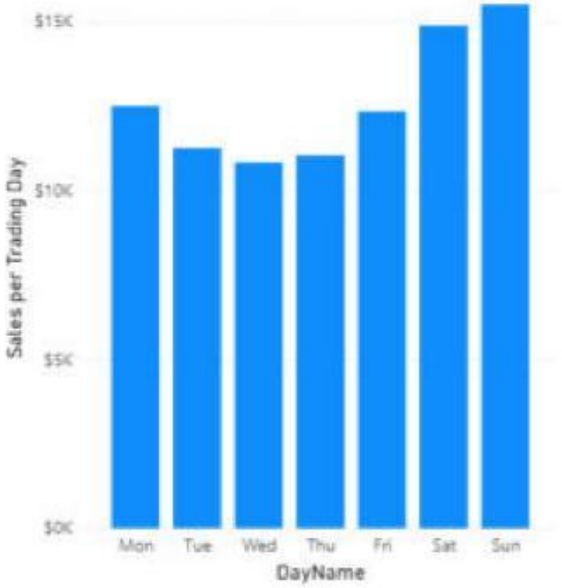

Month: All | department: All | IsFuel: All

$5M	14.8%	156K	$29.49	13.4	21.7%
Sales	Discount %	Baskets	Avg Basket Value	Items per Basket	Private Label Share

How are weekly sales trending? Bars: week; line: last four full weeks

Which days trade best? Sales per trading day

Petrol counts in Sales but not in units or items per basket (its 'quantity' is not a unit count). Week 53 has six trading days because Christmas Day is closed.

Stores: which stores lead and lag?

The extract has no store attributes (region, size, format), so stores are compared with each other.

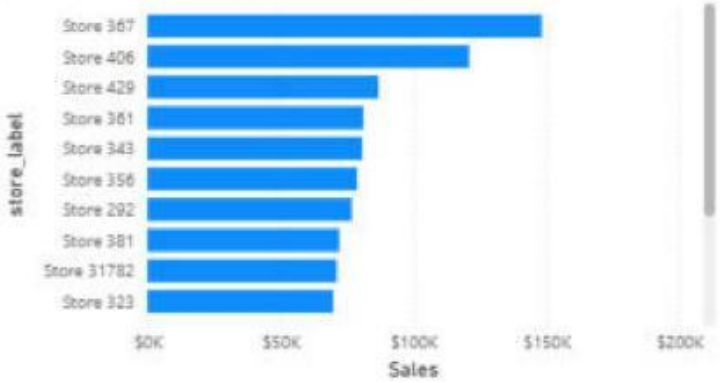

Month: All

department: All

Top 25 stores by sales

Top 15 stores by sales

Do stores win on visits or on basket size?

Departments and categories: what sells, and at what price?

Expand a department to see its categories. Petrol has no average selling price because its quantity is not units.

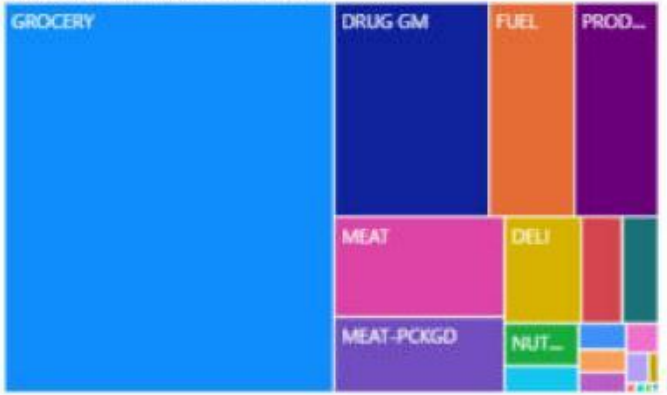

Month: All

department: All

Share of sales by department

Where does own label sell? Private label share

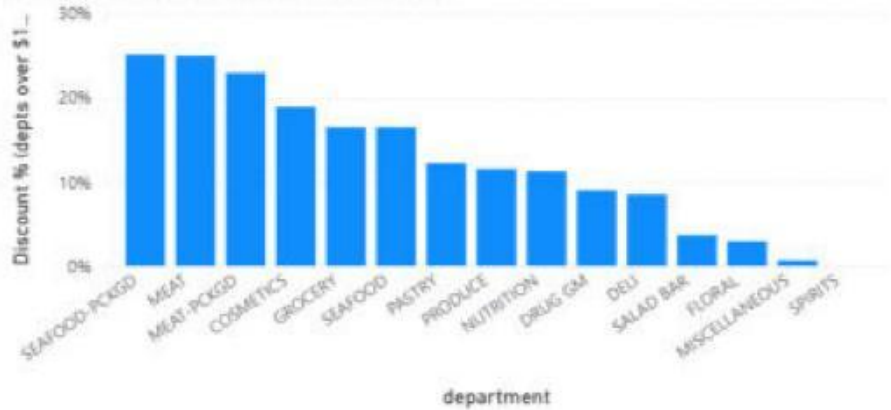

Discounts and coupons: where do discounts go?

Petrol excluded: departments under $10,000 of non-fuel sales hidden so tiny ones (TOYS: $4) do not distort the view.

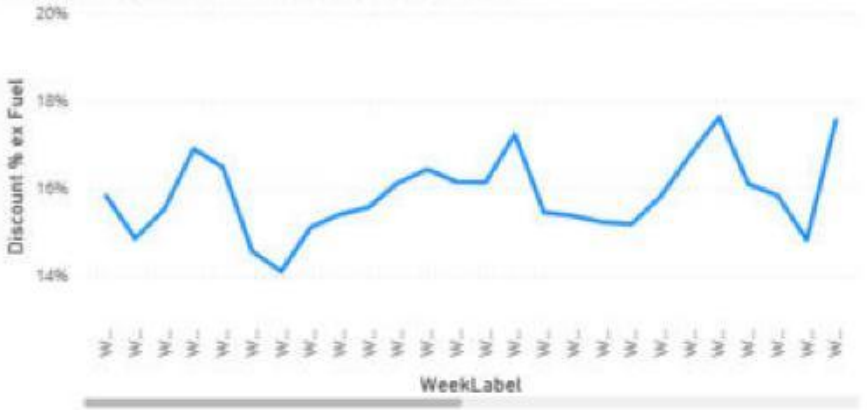

Month: All

department: All

Discount % of shelf value by department

Is discounting rising or falling through the year?

Retailer discount versus coupon match, by department

Manufacturer coupons (funded by manufacturers, not in Discount %)

$26K

Manufacturer Coupon Value

17 products missing from the product file account for a quarter of manufacturer coupon value on only $173 of sales: they look like coupon-redemption lines.

Data quality and reconciliation: can the numbers be trusted?

Loaded rows and sales are compared with control totals written by the export before Power BI saw the data.

0	$0.00
Row Difference	Sales Difference

1M	1M	$4.60M	$4.60M
Loaded Rows (all)	Control Rows	Sales (all)	Control Sales

Data-quality rules: expected count against what the model finds

RuleID	Check	Treatment	ExpectedCount	Actual (DQ rule)
DQ01	Lines with quantity = 0	Kept: the value counts in Sales, the line adds no units; flagged 'Zero quantity'	8,869	8,869
DQ02	Free items: quantity > 0 and sales_value = 0	Kept: genuine promotional give-aways; flagged 'Free item'	2,406	2,406
DQ03	Petrol lines: 'quantity' is not a unit count (up to 89,638 on one line)	Kept in Sales and Fuel Sales; excluded from Units, Items per Basket and Avg Selling Price	14,697	14,697
DQ04	Product on a sales line is missing from the product file	Kept; mapped to department UNKNOWN so no sales fall out of a department chart	4,836	4,836
DQ05	Negative values (returns, voids)	None found; the model does not handle returns	0	0
DQ06	Exact duplicate lines	None found; no de-duplication step	0	0
DQ07	Calendar days with no transactions	25 December only; flagged IsClosed; per-day measures divide by trading days	1	1
DQ08	Source week differs from the date table's week	None; the date table reproduces the source's Monday-start weeks (week 1 = 1 January only)	0	0
Total				

Assumptions

Gross Sales = sales_value + retail_disc + coupon_match_disc, assuming sales_value is net of those discounts.
US grocery data from 2017 (84.51°), in dollars; households are a sample of frequent shoppers.
Money was rounded to whole cents at export; 28 cells carried floating-point residue (largest 1.8e-15).
